Projects

Food Website (Static Landing Page)

Jan 2025

Tools: HTML, CSS, JS & BOOTSTRAP

Developed a visually appealing, responsive website for a local food business using **HTML, CSS, and Bootstrap**.

Responsibilities:

- Designed and developed static websites using HTML, CSS, and Bootstrap.
- Worked on UI/UX improvements for small business websites.
- www.heerakfood.in

CREDITFLOW (Loan Management & Credit Scoring Web App)

Feb 2025

Tools: HTML, CSS, JS, PHP, SQL & BOOTSTRAP

CreditFlow is a web-based fintech solution designed to simplify **loan management** and **credit scoring**. Built during a hackathon, the app offers users a smooth interface to apply for loans, view their credit score, and track application status — all through a secure and responsive web platform.

Responsibilities:

- Designed and developed the frontend using HTML, CSS, JavaScript, and Bootstrap with a clean, modern, and fully responsive UI..
- Implemented user authentication and session management using PHP and MySQL to ensure secure login and user-specific dashboards.
- Created a credit scoring module that evaluates user data and assigns creditworthiness using backend logic
- Deployed the entire web app on a live server for demo during the hackathon.
- https://creditsflow.netlify.app/

Academic Achievements

- Finalist at Indus University Hackathon 2025, under FinTech & Digital Payments for building CreditFlow, a full-stack web app for loan management and credit scoring using HTML, CSS, JS, PHP, MySQL, and Bootstrap.
- Built multiple personal and college-level web projects, including a Student Attendance Tracker and a Birthday Surprise App with interactive JS animations.
- Passionate about front-end development with strong knowledge of HTML, CSS, and UI Design; currently learning JavaScript and exploring backend with PHP and Java.
